

BHAVITH SHETTY

Data Analyst & Automation Engineer | Dashboards, Data Pipelines & Process Automation | Power BI, SQL & CI/CD

Mumbai, Maharashtra, India • bhavith-portfolio.vercel.app • github.com/bhavith1993

PROFESSIONAL SUMMARY

Data analyst and automation engineer with 5+ years and an engineering background (B.E. Electrical Engineering, manufacturing), delivering end-to-end data analytics, process automation, dashboards, and data pipelines. Defines automation and solution architecture, aggregates data from diverse sources into replicable, maintainable pipelines (code, orchestration, quality), and builds Power BI dashboards tracking KPIs, targets, and trends. Strong in SQL, ETL/ELT and API integration, data modeling (3NF, star, snowflake), and CI/CD, translating customer needs into scalable solutions and managing multiple projects to on-time delivery.

CORE SKILLS

- Automation & pipelines: Process automation and end-to-end solution architecture; data pipelines (code, orchestration, quality); batch ETL/ELT and on-demand API/SQL integration (Azure Data Factory, Alteryx, Fabric)
- Dashboards & BI: Power BI dashboards across KPIs and domains (targets, trends, snapshots), advanced DAX, Power Query (M), reusable datasets, RLS
- SQL & data: SQL/T-SQL (complex queries, optimization), SQL Server, Azure SQL; database management, data transformation and quality assurance; ERP data (IFS); Python
- Data modeling: 3NF, star/snowflake, normalized/denormalized schemas, semantic models, large-dataset optimization, incremental refresh
- DevOps & delivery: DevSecOps and CI/CD (Azure DevOps, PowerShell); performance tuning (Tabular Editor, DAX Studio, VertiPaq); multi-project delivery
- Governance & collaboration: Data governance, quality, and security (Purview, RBAC, RLS); requirements gathering; stakeholder management

PROFESSIONAL EXPERIENCE

Senior Power BI / Analytics Developer (Consultant)

Jan 2026 – Present

Independent (I4C mandate, Montreal)

Remote

- Lead data modeling efforts using star/snowflake schemas and best practices across Power BI and SQL-based environments, authoring advanced DAX.
- Write optimized, complex SQL to extract, transform, and load data from various sources, using CTEs, joins, subqueries, and indexing for performance.
- Design enterprise Power BI solutions and build scalable semantic models, with data quality validation through stored procedures during ingestion in Microsoft Fabric data pipelines.
- Implement data governance, quality, and RLS, and optimize performance through modeling, query optimization, and refresh strategy on Azure and Microsoft Fabric.
- Embedded a Power Apps visual within the settlement report so the accounts team could input data directly into a SharePoint list, with corrections calculated live in Power BI for a seamless write-back experience.
- Partner with stakeholders to gather and refine requirements and present insights clearly to non-technical audiences.
- Define end-to-end automation and solution architecture, aggregating data from diverse sources into replicable, maintainable pipelines, and establish coding standards and best practices.

System Analyst, Power BI and Data Engineering

Apr 2023 – Dec 2025

Brookfield Renewable Partners

Remote

- Designed and implemented enterprise-grade Power BI dashboards, reports, and data models, leading star/snowflake modeling and best practices.
- Wrote optimized, complex SQL to extract, transform, and load data from SQL Server, Azure SQL, APIs, and Excel, and built reusable datasets over large data volumes.
- Automated 12+ recurring Excel settlement reports through Microsoft Fabric (dimensional modeling, reusable semantic models), saving ~40 hours biweekly, and built an Alteryx payroll automation that validates codes against a mapping file (routing missing items to HR via Power Apps) and outputs a D365 ERP-ready GL file, saving 12+ manual hours.

- Optimized Power BI performance through data modeling, query optimization, and incremental data refresh, improving load times by 60%.
- Defined data governance, data quality, and security (RLS) (Purview, RBAC, SOX), reducing data-quality incidents by 80%.
- Automated dataset refresh via Power BI Service, Tabular Editor, and PowerShell, and delivered CI/CD deployment pipelines through Azure DevOps (Dev/Test/Prod).
- Developed Power Apps (SharePoint list and Excel sources) to handle ad-hoc requests across the SOX, audit, and operations teams, streamlining intake and reducing manual coordination.
- Collaborated with data engineers, architects, and stakeholders on scalable BI architecture, and mentored developers through code reviews and standards (Agile delivery).

BI Developer (Contract)

Lululemon Athletica

Sep 2022 – Mar 2023

Remote

- Built Power BI dashboards and reusable data models over large retail datasets, retrieving data via SQL Server stored procedures.
- Developed DAX measures and KPIs (inventory accuracy, stock aging, fulfillment) and optimized dataset performance.
- Built an inventory dashboard (SQL Server data source) with scheduled refresh, using Tabular Editor via the XMLA endpoint to support a higher refresh frequency than standard scheduled refresh allowed.
- Gathered requirements from business users and delivered dashboards meeting business objectives.

Senior Engineer

Adani Solar & PV Power Technologies

Jun 2016 – Dec 2020

India

- Worked as a production engineer in solar panel manufacturing, supporting production processes, output, and quality on the shop floor.
- Built Power BI dashboards and data models over production, output, and quality data (SQL Server and Excel sources) to give management visibility into manufacturing performance.
- Wrote SQL for data transformation and analysis, automated recurring reporting, and presented production and cost insights to support decisions.

EDUCATION

- PG Diploma, Data Analysis for Business Intelligence, St. Clair College, Canada; B.E., Electrical Engineering, Shivaji University
